Objective

Aspiring Machine Learning and Cybersecurity professional seeking to leverage skills in phishing detection and intelligent system development to enhance web security solutions.

Education

Master of Computer Applications (MCA)

Chanakya University — 2026

Technical Skills

Programming: Python

Machine Learning: KNN, SVM, Random Forest

Tools & Libraries: Scikit-learn, Pandas, NumPy, Jupyter Notebook, Google Colab

Concepts: Phishing Detection, Feature Extraction, Classification Techniques, Cybersecurity Basics

Project

Phishing Website Detection using Machine Learning

- Developed ML-based system to detect phishing websites
- Collected and processed datasets (phishing & legitimate)
- Extracted 14 key website features
- Implemented KNN, SVM, Random Forest
- Achieved ~98% accuracy with Random Forest
- Compared models for performance
- Designed basic real-time detection concept

Achievements & Learning

- Hands-on experience with ML classification models
- Learned phishing detection techniques
- Improved data preprocessing and feature engineering skills
- Strengthened analytical and problem-solving abilities
